Healthy Food for a Healthy Future

M5.5 Launch of the batch 2 of the second snapshot

Grant Agreement Number 951202

The French Agency for Food, Environmental

and Occupational Health & Safety (ANSES)

WP5

7 / June / 2022

Trainings for the data collection and data codification for the second batch of the second snapshot has been organized the 7th of June 2022.

Batch 2 of the second snapshot can therefore be considered as officially launched.

Meeting minutes from the trainings on the 7th of June can be found below.

Grant Agreement n°951202

WP5 meeting

WP 5 – Nutritional information

Chairperson: ANSES – Karine VIN

Meeting agenda	
Date	**7 June 2022**
Venue	**/**
Type of meeting	Conference call ☐ Visio conference ☒ One-to-one meeting ☐ General Assembly ☐ SC meeting ☐ WP meeting ☐ Task meeting ☐ Other (please specify) …………………………….

Participants	Organisation	Invited Participants
Associated partners	ANSES (France)	Caroline Alié (CA)
		Laure Barbier (LB)
		Thomas Laguitton (TL)
		Karine Vin (KV)
	NCPHA (Bulgaria)	Evelina Atseva
		Ekaterina Chikova-Iscener
		Ivelina Dicheva
		Vesselka Duleva
		Zornitsa Duneva
	DVFA (Denmark)	Camilla Berggreen
		Iben Kristensen
		Sanne Nielsen
	THL (Finland)	Emma Koivurinta
		Tiina Sirkjärvi
	ICH (Greece)	Eleftheria Papachristou
		Orestis Varkarolis
		Venetia Vraila
	ISS (Italy)	Elena Carrano
	DGS (Portugal)	Clara Salvador
	NIJZ (Slovenia)	Lea Raztresen

Important documents

Training for data collection and encoding (task 5.4.2)

Questions/remarks	Anses answer
Lea Raztresen asked how many people should be taking pictures in stores in order to complete the data collection within one month	Two people collecting data is sufficient to manage the data collection within one month. It is better to have two people for collecting because it is sometimes necessary to hold products in order to be able to take pictures
Iben Kristensen wondered if collecting only national brand and retailer brand products was meaning excluding international brands from the collection	The type of brand "National brand" includes national brands and international brands (in opposition to retailer brands). For example, Coca Cola products should be collected as national brand, although this is obviously an international brand
Camilla Berggreen asked for specification about the difference between national brands and retailer brands. Also, she inquired about what was meant	More details were given during the presentation. But shortly, retailers brands are the brands owned and sold by retailers. For example, the type of brand for products sold under the brand "carrefour" or "tesco" is retailer brand. "Lidl" products will be considered with the type "hard discount" as "Lidl" is a hard discount shop

by 'first price private label'	Products from 'first price private labels' are basic, discount products sold under retailer brands. Usually, the packaging is very basic, without color or pictures and the name frequently includes words like 'discount', 'eco', etc.
Sanne Nielsen explained that in Denmark, many soft discounters have their own private label brands and she wondered how these products should be considered (retailer brand or hard discount)	As soft discounters are still considered as discounters, we would recommend to attribute the type of brand 'hard discount' to the products collected there (rather than retailer brand).
Sanne Nielsen wondered if the front of pack labeling is included in the 'Commercial name' field	No, front of pack labels have their own field of codification in the template
Iben Kristensen proposed to include the Danish Whole Grain Logo into the monitored front of pack labels. Sanne Nielsen added that this logo has requirements for salt, sugars, fat, fibres and wholegrain	Our major concern is that this logo isn't used on all the food categories that will be collected (for example Delicatessen meats or Soft drinks are not concerned by this logo). The idea in the monitoring of front of pack labels is to follow logos that will be applied to all categories of products. This is the case for the Nutriscore, Traffic Light and all the other logos that have been taken into account.

We have validated the list of official logos to be included with the participating countries and the JRC at the beginning of the project |
| Eleftheria Papachristou asked if it is possible to calculate the number of units by using the portion size and the net weight, even if it is not clearly indicated on the package | No calculation should be made to complete the template of data collection. Only information indicated on the product packaging should be entered in the template. Also, the number of units does not necessarily represent the number of portions in a product, so it is better not to make this calculation. |
| Camilla Berggreen wondered also how to handle the number of units when it is not indicated on the product and she asked if it should be counted (count the number of slices for sliced ham for example) | In the same way as previously, nothing should be counted, only information indicated on the products packaging should be entered in the template. When the number of units is not indicated precisely on the product, you leave this field blank. |
